

# WAP The Window Facia Panel

**The fully fledged backlit annunciator featuring:**

- Ultra compact design with 24 inputs – window size 28x28 mm
- Up to 96 inputs cascadable up to 4 devices
- Integrated relays as an option
- Redundant power supply optionally
- Window sizes and colours as well as input processing completely parameterizable by Web-Server
- IEC 61850 / 60870-5-104 via copper or optical fibre
- Status LED for operation, collective reports, horn and power supplies

## → Unique Windows:

The WAP Annunciator comprises 24 highly configurable inputs in different variants from 24-220 V AC/DC.

The size of each window can be enlarged by a factor of two or four times. Moreover window groups formed of 3 inputs in a column or up to 8 inputs in a row can be designed.

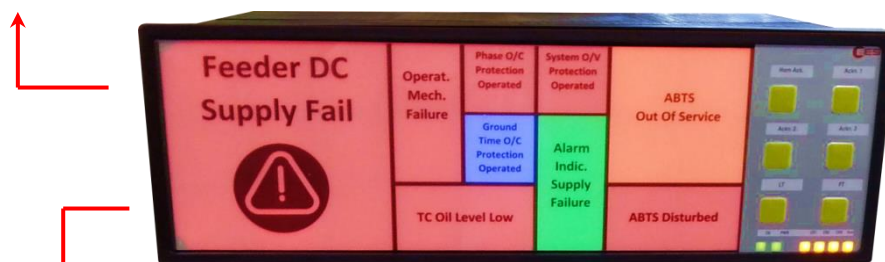

The essential advantage of our backlit design is that no mechanical changes are necessary to modify the window appearance. The individual size and colour of any window can be parameterised by browser easily by yourself on-site.

## → Other Highlights:

Integrated repeat relays freely assignable to inputs or even horn.  
Triggerable from IEC interface to execute single or double commands.

Up to 4 units can be cascaded together to form one annunciator in terms of parameterisation, acknowledgement, synchronisation, ...

3 parameterisable collective reports, integrated horn, relay output for external horn, 6 parameterisable push buttons.

IEC 61850 communication over RJ45 or optical fibre SC plugs. Similar connection over IEC 60870-5-104 or -101. Interface configuration by Drag and Drop via Web-Server.
